# Project Overview

## What is Blush & Bloom?

Blush & Bloom is a single-page beauty website designed to showcase skincare and makeup tips with an elegant, user-friendly interface. The project demonstrates core web development skills using HTML5 and CSS3.

The website features a soft pink color palette, responsive card layouts, and interactive elements that create a welcoming experience for beauty enthusiasts.

## Learning Goals

- Master HTML structure and semantic tags
- Apply CSS styling and layout techniques
- Create responsive, mobile-friendly designs
- Build interactive forms and navigation
- Develop professional presentation skills
- No javascript or backend technologies were used

# WEBSITE PAGES

- 1) Home Page(index.html)
- 2) Skincare Page(skin.html)
- 3) Makeup Page(makeup.html)
- 4) Testimonial Page(testimonial.html)
- 5) Contact Page(contact.html)

# Website Architecture

|                                                                                             |                                                                          |
|---------------------------------------------------------------------------------------------|--------------------------------------------------------------------------|
| 01                                                                                          | 02                                                                       |
| Home                                                                                        | Skincare Tips                                                            |
| Hero section with navigation menu and striking tagline: "Glow Naturally with Blush & Bloom" | Card-based layout featuring tips for oily, dry, and sensitive skin types |
| 03                                                                                          | 04                                                                       |
| Makeup Tips                                                                                 | Testimonials                                                             |
| Beauty advice organized by skin type using consistent card design                           | User reviews with star ratings to build trust and credibility            |
| 05                                                                                          | 06                                                                       |
| Contact Us                                                                                  | Footer                                                                   |
| Interactive form with name, email, and message fields                                       | Social media links, newsletter signup, and copyright information         |

# Glow Naturally with Blush & Bloom

Your all-in-one beauty guide for skincare & makeup.

## Skincare Tips

### Oily Skin

- Gel cleanser
- Oil-free moisturizer
- Clay mask weekly

### Dry Skin

- Cream cleanser
- Heavy moisturizer
- Hydrating serum

### Sensitive Skin

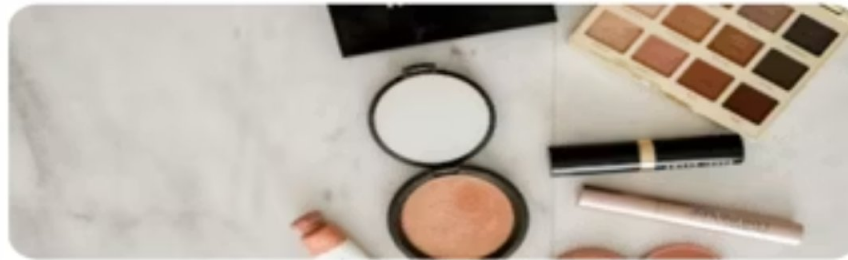

- Fragrance-free products
- Aloe vera gel
- Patch test mandatory

## Makeup Tips

### Oily Skin

- Matte primer
- Lightweight foundation
- Compact powder
- Mattifying setting spray

### Dry Skin

- Hydrating primer
- Liquid foundation
- Cream blush
- Dewy highlighter

### Sensitive Skin

- BB / CC cream
- Hypoallergenic products
- Minimal layering
- Patch test before use

# Design Highlights

## Skincare & Makeup Cards

Three-column card layout using **flexbox** with border-radius, box-shadow, and images. Each card contains tailored tips for different skin types.

## Contact Form

User-friendly form with rounded input fields, styled button, and clean spacing. Built using semantic HTML with CSS styling.

## Footer Design

Gradient background featuring social media icons, newsletter subscription, and copyright text with Font Awesome integration.

# Technologies & Tools

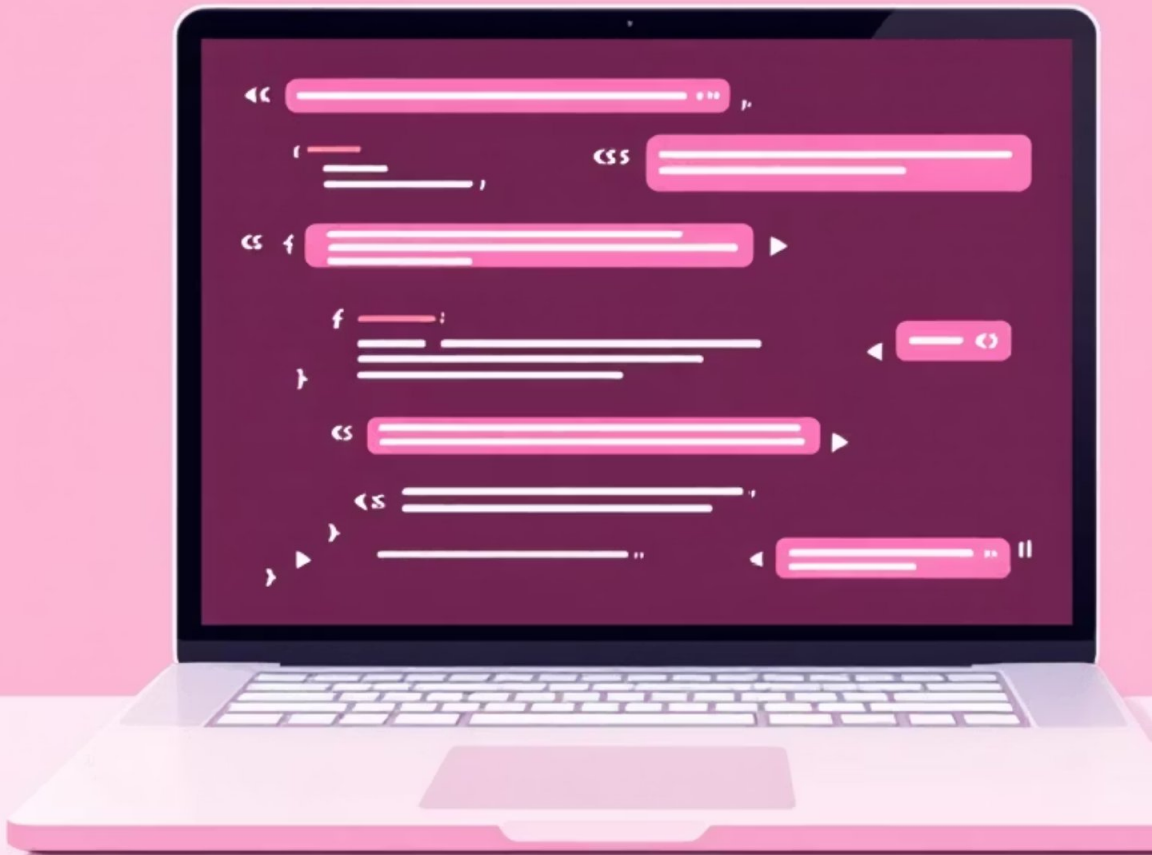

## HTML5

Semantic structure using modern tags like `<header>`, `<section>`, and `<footer>` to organize content logically and improve accessibility.

## CSS3

Advanced styling techniques including flexbox layouts, gradient backgrounds, custom fonts, and responsive design principles.

# Key Takeaways

This project provided hands-on experience with the fundamentals of web development. I learned how to structure content with HTML5, apply sophisticated styling with CSS3, and create a cohesive user experience.

Key skills developed include:

- Creating responsive card layouts with flexbox
- Designing user-friendly forms and navigation
- Implementing consistent color themes and typography
- Building trust through testimonials and social proof

The Blush & Bloom project demonstrates how HTML and CSS work together to create beautiful, functional websites that engage users and communicate effectively.

Thank You!
